ADDENDUM NO. 4

DATE: March 18, 2013
INVITATION FOR BID: IFB # F12177-1 Richmond North Side – Adaptive Traffic Signal Control System Project
DATED: February 19, 2013
RECEIPT DATE: March 26, 2013 @ 2:30 P.M.
OPENING DATE: March 27, 2013 @ 2:30 P.M.
SUBJECT: Questions and Answers, Specifications for Cabinets & Ethernet Switch

Ladies/Gentlemen:

Please take note of the following. The following are questions received and the City’s responses:

Question No. 1: What is the age of the asphalt for the various locations? (Corrected)
Answer No. 1: The age of the asphalt is as follows:
   a) Chamberlayne Ave – Less than 3 years old
   b) Brook Road – Less than 3 years old
   c) Hermitage Road – Older than 6 years
   d) Laburnum Ave – Between Hermitage Rd to Chamberlayne Ave - Over 6 years old
   e) Laburnum Ave – Between Chamberlayne Ave & North Ave – Between 3 yrs and 5 yrs old.

Question No. 2: Is there a Spec on the pole mounted cabinet and ground mounted cabinet, and what needs to be inside?
Answer No. 2: Cabinet Specifications are attached for Eagle Cabinets, Size 4. AND Flextra Special Purpose Series (Total 3 pages)

Question No. 3: Will be Specifications for the Ethernet switch be provided?
Answer No. 3: Specifications for the Ethernet Switch are attached for your reference. RuggedSwitch RS900G – 10 Port Managed Ethernet Switch with Gigabit Uplink Ports. (9 pages)

Vendor must take due notice and be governed accordingly. This addendum must be acknowledged as indicated in the Bid Book or your bid may not be considered.

Sincerely,

Wanda Farmer
Wanda Farmer, CPPB
Contract Specialist
804/646-5722
**Function**

The EAGLE Size 4 cabinet protects electronic components including controllers and other instruments.

**Features**

The EAGLE Size 4 cabinet features an aluminum enclosures for protection from all forms of outdoor natural elements, including rain, sleet, and snow, as well as seepage and splash.

**Specifications**

**Enclosure**

2. Internal attaching components include four (4) adjustable "C" mounting channels (2 per side). Add two (2) slotted rails on rear wall for attaching equipment panels.

3. Door opening single-flanged in the sides and bottom, and double-flanged on top to prevent water drops when the door is open. Opening includes a mount for two door-operated switches.

4. Thermoconvection air ventilation system utilized with provisions for mounting fan for forced-air cooking. Exhaust outlet openings provided under the roof overhang.

5. All internal and external hardware utilize non-corrosive material.

6. Adjustable 3/8"-diameter stainless steel door stop can be latched in various positions.

**Door**

1. Provided with three-point locking mechanism with duplex nylon rollers top and bottom.

2. 3/4"-diameter stainless steel outward turning handle with provisions for padlocking.

3. Main door lock - industrial standard pin tumbler lock with #2 key.

4. Louvered inlet with filter to prevent dirt from entering with air flow.

5. Closed-cell neoprene door seal gasket.

6. Heavy gauge aluminum butt hinge utilizing a non-removable 3/16"-diameter stainless steel hinge. Carriage bolted in place for ease of door removal.

7. 2"-deep, fabricated switch compartment included with standard "police" lock and 14-gauge stainless steel continuous hinge with 3/32"-diameter hinge pin riveted in place. Compartment mounted flush to the door.

Two (2) shelves included.
### Options

1. Inward-rotating door handle to eliminate door handle projection.
2. Double-flanged door frame to provide a better splash shield.
3. Continuously welded enclosure for maximum protection from contaminants.
4. Heavy gauge stainless steel continuous hinge utilizing a non-removable 3/16"-diameter hinge pin.
5. Pedestal or pole mount available
6. Special lock keying combinations.
7. Special finish per customer requirements.

### Ordering Information

*Order 1 EL712 Collar, if required.
**Order 2 pole mount brackets, UL26, if required.
Can be installed on any existing ground mount enclosure

- Engineered to minimize temperature differential between batteries
- Powder coat finish provides excellent corrosion protection
- Available in clear coat, seafoam green, pine green and gray
- B4 dimensions (in/mm): 19.5W x 48H x 8.75D/495W x 219H x 222W
- S4 dimensions (in/mm): 16.4W x 48.1H x 17.60D/417W x 1222H x 447W

Alpha’s Flextra special purpose enclosures provide a cost-effective method of adding standby capacity to any installed ground mount enclosure. The Flextra B4 provides space to mount a 48V battery string, and for optimum battery life, has been engineered to minimize the temperature differential between batteries located within the existing enclosure and batteries in the B4. It can be mounted on either the right or the left side of the enclosure. The Flextra B4 kit includes the enclosure and door, key set, and all necessary mounting hardware and installation instructions.

The Flextra S4 enclosure is designed to fit on the side of most traffic controller cabinets. Any of Alpha Technologies’s line of Novus UPS can fit inside, providing you with a range of backup power from 500 to 2200W. The Flextra S4 enclosure can accommodate a wide variety of AlphaCell™ batteries allowing you the maximum possible range of backup time for your system. The NEMA 3R rating means the enclosure is able to protect its internal components from the harsh outdoor environment.
The RuggedSwitch® RS900G is an industrially hardened, fully managed Ethernet switch providing dual fiber optical Gigabit Ethernet ports and eight Fast Ethernet copper ports.

Designed to operate reliably in harsh industrial environments the RS900G provides a high level of immunity to electromagnetic interference and heavy electrical surges typical of environments found in electric utility substations, factory floors or in curb side traffic control cabinets. An operating temperature range of -40°C to +85°C coupled with hazardous location certification, optional conformal coating and a galvanized steel enclosure allows the RS900G to be placed in almost any location.

The embedded Rugged Operating System (ROS®) provides advanced networking features such as Enhanced Rapid Spanning Tree (eRSTP™), Port Rate Limiting and a full array of intelligent functionality for high network availability and manageability.

The versatility and wide selection of fiber optics allows the RS900G to be used in a variety of applications. The RS900G provides two fiber optical Gigabit Ethernet ports for creating a fiber optical backbone with high noise immunity and long haul connectivity.

The embedded Rugged Operating System (ROS®) provides advanced layer 2 networking functions, and advanced cyber security features. Coupled with the ruggedized hardware design, RS900G is ideal for creating mission-critical, real-time, control applications where high reliability and availability is of paramount importance.

Cyber Security Features
- Multi-level user passwords
- SSH/SSL (128-bit encryption)
- Enable/disable ports, MAC based port security
- Port based network access control (80.1x)
- VLAN (802.1Q) to segregate and secure network traffic
- RADIUS centralized password management
- SNMPv3 authentication and 56-bit encryption

RuggedRated™ for Reliability in Harsh Environments
- Immunity to EMI and heavy electrical surges
  - Meets IEEE 1613 (electric utility substations)
  - Exceeds IEC 61850-3 (electric utility substations)
  - Exceeds IEC 61800-3 (variable speed drive systems)
  - Exceeds IEC 61000-6-2 (generic industrial)
  - Exceeds NEMA TS-2 (traffic control equipment)
- Hazardous Location Certification: Class 1 Division 2
- -40 to +85°C operating temperature (no fans)
- Conformal coated printed circuit boards (optional)

Rugged Operating System (ROS®) Features
- Simple plug and play operation - automatic learning, negotiation, and crossover detection
- MSTP 802.1Q-2005 (formerly 802.1s)
- RSTP (802.1w) and Enhanced Rapid Spanning Tree (eRSTP™) network fault recovery (<5ms)
- Quality of Service (802.1p) for real-time traffic
- VLAN (802.1Q) with double tagging and GVRP support
- Link aggregation (802.3ad)
- IGMP Snooping for multicast filtering
- Port Rate Limiting and Broadcast Storm Limiting
- Industrial automation features (eg. Modbus)

Management Tools
- Web-based, Telnet, CLI management interfaces
- SNMP v1/v2/v3 (56-bit encryption)
- Remote Monitoring (RMON)
- Rich set of diagnostics with logging and alarms

Universal Power Supply Options
- Fully integrated power supply
- Universal high-voltage range: 88-300VDC or 85-264VAC
- Dual low-voltage DC inputs: 24VDC (10-36VDC) or 48VDC (36-72VDC)
- Terminal blocks for reliable maintenance free connections
- CSA/UL 60950 safety approved to +85°C
RuggedSwitch® RS900G

Dual Gigabit Ports:
- Pluggable Optics (SFP)
- LC or SC connectors
- Bi-directional (single strand)
- Distances up to 70km

Rugged Construction:
- 20 AWG. galvanized steel enclosure
- Conformal coating (optional)

Hazardous Location Certification
- Class 1, Division 2

Integrated Power Supply
- Universal high-voltage range: 88-300VDC or 85 - 264VAC
- Popular low voltage DC ranges: 24VDC (10-36VDC)
  48VDC (36-59VDC)
- Dual Isolated DC power inputs

Operating Temperature
- -40°C to +85°C
- No Fans

Fast Ethernet Ports:
- 8 - Fast Ethernet Ports (10/100BaseTX)

Mounting Options
- Din Rail
- Panel Mount

Critical Alarm Relay
- Form-C failsafe contact relay: 1A@30VDC
Cyber Security
Cyber security is an urgent issue in many industries where advanced automation and communications networks play a crucial role in mission critical applications and where high reliability is of paramount importance. Key ROS® features that address security issues at the local area network level include:

- **Passwords** - Multi-level user passwords secures switch against unauthorized configuration
- **SSH / SSL** - Extends capability of password protection to add 128-bit encryption of passwords and data as they cross the network
- **Enable/Disable Ports** - Capability to disable ports so that traffic can not pass
- **802.1Q VLAN** - Provides the ability to logically separate traffic between predefined ports on switches
- **MAC Based Port Security** - The ability to secure ports on a switch so only specific Devices / MAC addresses can communicate via that port
- **802.1x Port Based Network Access Control** - The ability to lock down ports on a switch so that only authorized clients can communicate via this port
- **RADIUS** - authentication service using MD5 hash and providing centralized password management
- **SNMPv3** - encrypted authentication access security and data encryption (CBC-DES with 56-bit encryption key)
- **Secure Socket Layer** - Web-based management using SSL with data encryption (128-bit encryption key)
- **RSA** – 1024 bit key for key management and key exchange
- **TACACS+** - Terminal Access Control and Accounting Services Client provides encrypted authentication and authorization
- **Point to Point (PPP)** - using CHAP (MD5 Hash) authentication service
- **SFTP** - Secure File Transfer Protocol using SSH encryption

The ROS® cyber security features are included to help address the various industry specific security standards such as NERC CIP, ISA S99, AGA 12, IEC 62443, ISO 17799:2005 and PCSRF SPP-ICS.

Enhanced Rapid Spanning Tree Protocol (eRSTP™)
RuggedCom eRSTP™ allows the creation of fault-tolerant ring and mesh Ethernet networks that incorporate redundant links that are ‘pruned’ to prevent loops. eRSTP™ yields worst-case fault recovery of 5ms times the ‘bridge diameter’ and allows rings of up to 160 switches. For example, a ring of ten switches will have fault recovery times under 50ms. eRSTP™ implements both STP and RSTP to ensure interoperability with commercial switches unlike other proprietary ‘ring’ solutions.

Quality of Service (IEEE 802.1p)
Some networking applications such as real-time control or VoIP (voice over IP) require predictable arrival times for Ethernet frames. Switches can introduce latency in times of heavy network traffic due to the internal queues that buffer frames and then transmit on a first come first serve basis. ROS® supports ‘Class of Service’ in accordance with IEEE 802.1p that allows time critical traffic to jump ahead to the front of the queue thus minimizing latency and reducing jitter to allow such demanding applications to operate correctly. ROS® allows priority classification by port, tags, MAC address, and IP type of service (ToS).

A configurable “weighted fair queuing” algorithm controls how frames are emptied from the queues.

VLAN (IEEE 802.1Q)
Virtual local area networks (VLAN) allow the segregation of a physical network into separate logical networks with independent broadcast domains. A measure of security is provided since hosts can only access other hosts on the same VLAN and traffic storms are isolated. ROS® supports 802.1Q tagged Ethernet frames and VLAN trunks. Port based classification allows legacy devices to be assigned to the correct VLAN. GVRP support is also provided to simplify the configuration of the switches on the VLAN.

Link Aggregation (802.3ad)
The link aggregation feature provides the ability to aggregate several Ethernet ports into one logical link (port trunk) with higher bandwidth. This provides an inexpensive way to set up a high speed backbone to improve network bandwidth. This feature is also known as “port trunking”, “port bundling”, “port teaming”, and “Ethernet trunk”.

IGMP Snooping
ROS® uses IGMP snooping (Internet Group Management Protocol v1&v2) to intelligently forward or filter multicast traffic streams (e.g. MPEG video) to or from hosts on the network. This reduces the load on network trunks and prevents packets from being received on hosts that are not involved. ROS® has a very powerful implementation of IGMP snooping that:

- Can be enabled on a per VLAN basis.
- Detects and filters all multicast streams regardless of whether subscribers exist.
- Supports “router-less” operation by supporting an “active” mode.
- Restores traffic streams immediately after an RSTP topology change.

SNMP (Simple Network Management Protocol)
SNMP provides a standardized method for network management stations the ability to interrogate devices from different vendors. SNMP versions supported by ROS® are v1, v2c, and v3. SNMPv3 in particular provides security features such as authentication, privacy with data encryption (CBC-DES with 56-bit encryption key) and access control not present in earlier SNMP versions. ROS® also supports numerous standard MIBs (Management Information Base) allowing for easy...
integration with any network management system (NMS).

A feature of SNMP supported by ROS® is the ability to generate “traps” upon system events. RuggedNMS™, the RuggedCom management solution, can record traps from multiple devices providing a powerful network troubleshooting tool. It also provides a graphical visualization of the network and is fully integrated with all RuggedCom products.

1 eRSTP fault recovery times may be approximated as follows:
- For 100 Mbps, fault recovery performance is <5ms/hop
- For 1000 Mbps, fault recovery performance is <5ms/hop + 20ms

SNTP (Simple Network Time Protocol)
SNTP automatically synchronizes the internal clock of all ROS® devices on the network. This allows for correlation of time stamped events for troubleshooting.

SCADA and Industrial Automation
ROS® contains features that optimize network performance and simplify switch management based on the unique requirements found in SCADA and industrial automation applications. Features such as Modbus TCP management for retrieval of switch data using the ubiquitous Modbus protocol and DHCP Option 82, a Rockwell Automation ODVA requirement for IP address assignment based on the location of the end device, provide capabilities not found in typical "commercial" or "office grade" Ethernet switches.

Port Based Network Access Control (802.1x)
ROS® supports the IEEE 802.1x standard that defines a mechanism for port-based network access control which provides a means of authenticating and authorizing devices attached to LAN ports.

Port Rate Limiting
ROS® supports configurable rate limiting per port to limit unicast and multicast traffic. This can be essential to managing precious network bandwidth for service providers. It also provides edge security for denial of service (DoS) attacks.

Broadcast Storm Filtering
Broadcast storms wreak havoc on a network and can cause attached devices to malfunction. This could be disastrous on a network with mission critical equipment. ROS® limits this by filtering broadcast frames with a user-defined threshold.

Loss of Link Management
Some intelligent electronic devices (IEDs) have dual fiber optic ports with automatic failover to a backup port should the primary fail. ROS® ensures this mechanism works reliably under all failure modes by appropriately disabling link signals when required. ROS® also flushes learned MAC addresses to ensure the failover occurs quickly.

Port Mirroring
ROS® can be configured to duplicate all traffic on one port to a designated mirror port. When combined with a network analyzer, this can be a powerful troubleshooting tool.

Port Configuration and Status
ROS® allows individual ports to be ‘hard’ configured for speed, duplex, auto-negotiation, flow control and more. This allows proper connection with devices that do not negotiate or have unusual settings. Detailed status of ports with alarm and SNMP trap on link problems aid greatly in system troubleshooting.

Port Statistics and RMON (Remote Monitoring)
ROS® provides continuously updating statistics per port that provide both ingress and egress packet and byte counters as well as detailed error figures. Also provided is full support for the RMON statistics, history, alarms, and event groups. RMON allows for very sophisticated data collection, analysis and detection of traffic patterns.

Event Logging and Alarms
ROS® records all significant events to a non-volatile system log allowing forensic troubleshooting. Events include link failure and recovery, unauthorized access, broadcast storm detection, and self-test diagnostics among others. Alarms provide a snapshot of recent events that have yet to be acknowledged by the network administrator. An external hardware relay is de-energized during the presence of critical alarms allowing an external controller to react if desired.

HTML Web Browser and Telnet User Interfaces
ROS® provides a simple, intuitive user interface for configuration and monitoring via a standard graphical web browser or via Telnet. All system parameters include detailed on-line help to make setup a breeze. ROS®, presents a common look and feel and standardized configuration process allowing easy migration to other RuggedCom managed products.

Configuration via ASCII Text File
All configuration parameters are stored in an ASCII formatted text file that can easily be transferred via TFTP or Xmodem. The configuration file can be saved for backup purposes and easily manipulated by a text editor. The same text file can be downloaded to the switch at a later date in order to re-configure or restore a previous configuration.

Command Line Interface (CLI)
A command line interface can be used in conjunction with remote shell to automate data retrieval, configuration updates, and firmware upgrades. A powerful SQL-like capability allows expert users the ability to selectively retrieve or manipulate any parameters the device
## EMI and Environmental Type Tests

Notes:
1. Only applicable to functional earth connections separated from the safety earth connection.
2. Class 2 refers to "Measuring relays and protection equipment for which a very high security margin is required or where the vibration levels are very high, (e.g. shipboard application and for severe transportation conditions)"
Technical Specifications

Power Supply
- Power Consumption: 10W Max
- 24VDC: 10-36 VDC, 0.4A
- 48VDC: 36-72 VDC, 0.2A
- HI Voltage AC/DC: 88-300VDC or 85-264VAC

Critical Alarm Relay
- Form-C failsafe contact relay: 1A@30VDC

Physical
- Height: 18.8cm / 7.4"
- Width: 6.6cm / 2.6"
- Depth: 12.7cm / 5.0"
- Weight: 1.22kg / 2.7lbs
- Ingress Protection: IP40 (1mm objects)
- Enclosure: 20 AWG galvanized steel enclosure
- Mounting: DIN rail or panel mounted

Switch Properties
- Switching method: Store & Forward
- Switching latency: 7 us
- Switching bandwidth: 5.6Gbps
- MAC addresses: 8192
- MAC address table size: 32kbytes
- Priority Queues: 4
- Frame buffer memory: 2 Mbit
- VLANs: 255
- IGMP multicast groups: 256
- Port rate limiting: 128kbps, 256, 512, 4, 8Mbps
- No head of line blocking

Approvals
- Hazardous Locations: Class 1, Division 2
- ISO: Designed and manufactured using a ISO9001: 2000 certified quality program
- CE Marking
- Emissions: FCC Part 15 (Class A), EN55022 (CISPR22 Class A)
- Safety: cCSAus (Compliant with CSA C22.2 No. 60950, UL 60950, EN60950)
- Laser Eye Safety (FDA/CDRH): Complies with 21 CFR Chapter1, Subchapter J.

Warranty
- 5 Years - Applicable to design and manufacturing related product defects.

Network Management
- HTTP graphical web-based, SSL (128-bit encryption)
- SNMP v1, v2c, v3 (56-bit encryption)
- Telnet, VT100, SSH/SFTP (128-bit encryption)
- Command Line Interface (CLI)
- RSA Key Management (1024 bit key)
- Authentication and Accounting - TACACS+ (encrypted), RADIUS client, PPP

EMI Immunity and Environmental Compliance
- IEC 61000-6-2 Industrial (Generic)
- IEC 61800-3 Industrial (Variable Speed Drive Systems)
- IEC 61850-3 Electric Utility Substations
- IEEE 1613 Electric Utility Substations
- NEMA TS 2 Traffic Control Equipment
- EN 50121-4 Railway Applications

IEEE Compliance
- 802.3-10BaseT
- 802.3u-100BaseTX, 100BaseFX
- 802.3x-Flow Control
- 802.3z-1000BaseLX
- 802.3ab-1000BaseTX
- 802.3ad-Link Aggregation
- 802.1d-MAC Bridges
- 802.1d-Spanning Tree Protocol
- 802.1p-Class of Service
- 802.1Q-VLAN Tagging
- 802.1w-Rapid Spanning Tree Protocol
- 802.1x-Port Based Network Access Control
- 802.1Q-2005 (formerly 802.1s) MSTP

IETF RFC Compliance
- RFC768-UDP
- RFC783-TFTP
- RFC791-IP
- RFC792-ICMP
- RFC793-TCP

Fiber Optical Specifications

- **Mode**: Multimode, Singlemode
- **Connector**: LC, LC-SFP, SC, LC, LC-SFP, SC, LC, LC-SFP, LC-SFP
- **Typical Dist.**: 500m, 10km, 25km, 70km
- **Optical Wavelength (nm)**: 850, 1310, 1310, 1550
- **Cable Size/Core/Cladding (um)**: 50/125 or 62.5/125, 8/125 or 9/125, 8/125 or 9/125
- **TX Power (Min/Max) (dBm)**: -9.5/-4, -9/-3, -7 / -3, 0 / 5
- **RX Sensitivity (dBm)**: -20, -22, -26, -23
- **RX Saturation (dBm)**: 0, -3, -3, 0
- **Typical Budget (dB)**: 14, 17, 19, 25
RuggedSwitch® RS900G
10-Port Managed Ethernet Switch with Gigabit Uplink Ports, 128-bit Encryption

Order Codes

RS900G - PS - M - P9P10 - MOD

PS: Power Supply
- 24 = 24 VDC (10-36 VDC)
- 48 = 48 VDC (36-72 VDC)
- HI = 88-300VDC or 85-264VAC

M: Mounting Option
- D = DIN Rail
- P = Panel Mount
- N = None

P9P10 Transceiver Options:
- 2SFP = Dual 1000X SFP (Mini-GBIC). Order SFP Optics Separately.
- 2LCMM = Dual 1000SX Multimode LC 850nm 500m
- 2LC10 = Dual 1000LX Singlemode LC 1310nm 10km
- 2LC25 = Dual 1000LX Singlemode LC 1310nm 25km
- 2SC10 = Dual 1000LX Singlemode SC 1310nm 10km
- 2SC25 = Dual 1000LX Singlemode SC 1310nm 25km

SFP (Mini-GBIC) Transceiver Options:
- 99-25-0111 = 1000SX SFP, Multimode, LC, 850nm, 500m
- 99-25-0100 = 1000LX SFP, Singlemode, LC, 1310nm, 10 km
- 99-25-0101 = 1000LX SFP, Singlemode, LC, 1310nm, 25 km
- 99-25-0109 = 1000LX SFP, Singlemode, LC, 1550nm, 70 km
- 99-25-0025 = 1000TX SFP, RJ45

MOD: Manufacturing Modifications
- XX = None
- C01 = Conformal Coating

Options
43-10-0008 - 6 ft Power Cable without Lugs

Notes
1 Distance ratings are typical but will depend on type of cabling, number of connectors and splices.
2 Should you not find an appropriate fiber optic option listed here, please consult RuggedCom for other options.
3 These tranceivers have an operating temperature range of -20 to +85°C. All other tranceivers have an operating temperature range of -40° to +85°C.

Example Order Codes:

- RS900G-24-D-2LCMM-XX
  24VDC Power Supply, DIN Rail Mount, Dual 1000SX Multimode LC 850nm 500m
- RS900G-48-P-2LC25-C01
  48VDC Power Supply, Panel Mount, Dual 1000LX Singlemode LC 1310nm 25km, Conformal Coating
- RS900G-HI-N-2SC10-C01
  HI Power Supply, Dual 1000LX Singlemode SC 1310nm 10km, Conformal Coating
